What's New

There has been a change in the E+G lighting inventory over the past year-and-a-half moving away from bi-color lights to more full color lights like the Aputure Storm series lights with their exceptional color quality. The goal is to provide the best lighting for your shoot whether it is a corporate talking head or a dramatic film scene.

Godox Lite Flow 100 Double-sided Reflector Kit

Lite Flow reflectors have exceptional reflectance. This 2-reflector kit has greater brightness and control than traditional shiny boards. The reflectors are double-sided with diffusion rated from 1 to 4; great for controlled reflections of the sun or large lights. Also available is the Lite Flow 50 kit (see in the "Grip" section). Always use cotton gloves to handle Lite Flows. Cotton gloves are provided with Lite Flow kits.

Aputure Storm 80C 3-Light Kit

A light kit that has everything you want in a location kit featuring 3 of the new Aputure Storm 80C lights. These 80-watt full-color lights have the Aputure Blair CG light engine with exception brightness and color quality with a CCT range from 1800 to 20000 Kelvin with full green/magenta adjustment, and full color. The kit includes: three Storm 80c heads, 3-hyper reflectors, 2-CF4 fresnels with barn doors, 3-mini-globe diffusers, 1-Light Dome 40 softbox, 1-bowens adapter (the lights have a mini-bowens mount), 1-handheld bracket, battery cables, 3-mounting clamps with mini-flex arms, and a hard-shell case.

Pecron E3600LFP Power Stations

The Pecron E3600LFP power stations are an impressive new option for electric power on location. These new powerful power stations have 3600-watt maximum output with 3072 watt-hours of power. Like the Pecron 1500 power stations, they have AC and DC outputs, with fast charging. Connecting 2 of the E3600LFPs with the optional 240-volt kit, can provide 7200 watts of power at 240 volts. That is enough power for an XT52 running over an hour. The E3600LFPs have a UPS function with 20ms of fast switching.
